                                                                                                                                                                                                                  Sequence 1, Application US/09452294

Patent No. 6287790

GENERAL INFORMATION:
APPLICANT: Lelievre, Sophie
APPLICANT: Bissell, Mina
TITLE OF INVENTION: UTILIZATION OF NUCLEAR STRUCTURAL PROTEINS FOR TARGETED
TITLE OF INVENTION: DIFFERENTIATION DISORDERS
TITLE OF INVENTION: DIFFERENTIATION DISORDERS
FILE REPERENCE: IB-1454 - Sequence Submittal
Patent No. 6287790
CURRENT APPLICATION NUMBER: US/09/452, 294
CURRENT FILING DATE: 1999-11-30
PRIOR APPLICATION NUMBER: 60/110,420
PRIOR PILING DATE: 1998-11-30
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   15;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A; Title: A unique cellular myosin II exhibiting differential expression in the cerebral A; Reference number: PN0013
A; Recession: PN0013
A; Molecule type: mRNA
A; Residues: 1914-1998, I' < SU2>
A; Residues: actin binding: ATP; coiled coil; hydrolase; methylated amino acid; nucleotid C; Superfamily: myosin motor domain homology < AMOT>
F; 84-763/Domain: myosin motor domain homology < AMOT>
F; 74-181/Region: nucleotide-binding motif A (P-loop)
F; 74-181/Region: actin binding *status predicted
F; 836-1999/Domain: coiled coil *status predicted < CO1>
F; 836-1999/Domain: coiled coil *status predicted
F; 836-1999/Domain: coiled coil *status predicted
F; 135/Addified site: ATP (Lys) *status predicted
F; 135/Addified site: ATP (Lys) *status predicted
F; 1916/Binding site: ATP (Ser) (covalent) *status predicted
F; 1943/Binding site: phosphate (Ser) (covalent) *status predicted
                                                       N'Alternate names: myosin II
N'Contains: myosin ATPase (EC 3.6.4.1)
N'Contains: myosin ATPase (EC 3.6.4.1)
C'Species: Rattus norvegicus (Norway rat)
C'Species: Rattus norvegicus (Norway rat)
C'Accession: S21801; PN0013; S18134
C'Accession: S21801; PN0013; S18134

Strausberg R.;
Submitted (DEC-2000) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Activates NF-kappaB via Bcl10 and IKK. Stimulates the phosphorylation of Bcl10.
-!- SUBUNIT: CARD14 and Bcl10 bind to each other by CARD-CARD
                                                                                                                                                                                                                               [1] SEQUENCE FROM N.A. TISSUE SPECIFICITY: Detected in adult peripheral blood leukocytes, thymus, spleen and liver. Also found in promyelocytic leukemia HL-60 cells, chronic myelogenous leukemia K562 cells, Burkitt's lymphoma Raji cells and colorectal adenocarcinoma SW480 cells. Not detected in HeLa S3, Molt-4, A549 and G431 cells. Burkitt's CHISANIN: CAND DOWAIN. SIMILARITY: CONTAINS 1 CARD DOWAIN.
SIMILARITY: CONTAINS 1 CARD DOMAIN.
SIMILARITY: CONTAINS 1 G1AND LATE KINASE-LIKE DOMAIN.
PROSITE, Pfam or SMART.
                  (CARD-containing MAGUK protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaide O., Martinon F., Micheau O., Bonnet D., Thome M., Tschopp J.; FEBS Lett. 505:198-198(2001).
-!- FUNCTION: Activates NF-kappaB via Bcl10 and TKK. Stimulates the phosphorylation of Bcl10.
-!- SUBUNIT: CARD11 and Bcl10 bind to each other by CARD-CARD
                                                                                                                                                                                          Bertin J., Wang L., Guo Y., Jacobson M.D., Poyet J.-L., Srinivasula S.M., Merriam S., DiStefano P.S., Alnemri E.S.; "CARD11 and CARD14 are novel caspase recruitment domain. (CARD)/membrane-associated quanylate kinase (MAGUK) family members that interact with Bcll0 and activate NF-kappaB."; J. Biol. Chem. 276:11877-11882(2001).

-!- FUNCTION: Activates NF. kappaB via Bcll0 and IKK.
-!- SUBUNT: CARD10 and Bcll0 bind to each other by CARD-CARD
INTERACTION: They both participate in a complex with MALT1, where
MALT1 binds to Bcll0 (By similarity).
-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
-!- TISSUB SPECTIFICITY: Detected in adult heart, kidney and liver;
-!- Inver levels in intestine, placenta, muscle and lung. Also found
in fetal lung, liver and kidney.
-!- SIMILARITY: CONTAINS 1 CARD DOWAIN.
-!- CAUTION: Supposed to contain a SH3, a PDZ and a guanylate kinase-
-!- Like domain. But none of these 3 domains are detected by PROSITE,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         {\tt CAUTION:\ Ref.4} sequence differs from that shown due to various gene identification problems.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Length 1032;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              C -> R (IN REF. 4).

Blol. Chem. 275-141082-41086(2000).

-I. FUNCTION: Activates W.F.kappaB via Bc110 (By similarity).

-I. SUBUNT: Self-associates. CARD9 and Bc110 bind to each other by CARD-CARD interaction (By similarity).

-I. SUBCELULAR LOCATION: Cytoplasmic (By similarity).

-I. SIMILARITY: CONTAINS 1 CARD DOMAIN.

"Characterization of the kinetochore binding domain of CENP-E reveals interactions with the kinetochore proteins CENP-F and hBUBRI.";

J. Cell Biol. 143:49-63(1998).

- I- FUNCTION: MINUS-END DIRECTED MICROTUBULE MOTOR. PROBABLE KINETOCHORE MOTOR. ACCUMULATES JUST BEFORE MITOSIS AT THE G2 PHASE OF THE CELL CYCLE. PROBABLY IMPORTANT FOR CHROMOSOME MOVEMENT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SUBGNIT: INTERACTS WITH CENP-F AND BUBR1 KINASE.
SUBCELLULAR LOCATION: ASSOCIATES WITH KINETOCHORES DURING
CONGRESSION, RELOCATES TO THE SPINDLE MIDSONE AT ANAPHASE, AND IS
QUANTITATIVELY DISCARDED THE NED OF THE CELL DIVISION.
SIMILARITY: BELONGS TO THE KINESIN-LIKE PROTEIN FAMILY.

-1-SUBUNT: WOSIN IS A HEXAMERIC PROTEIN THAT CONSISTS OF 2 HEAVY
CHAIN SUBUNITS (MHC), 2 ALKALI LIGHT CHAIN SUBUNITS (MLC) AND 2
REGULAPORY LIGHT CHAIN SUBUNITS (MLC-2).

-1-DOMAIN: THE RODLIKE TAIL SEQUENCE IS HIGHLY REPETITIVE, SHOWING
CYCLES OF A 28-RESIDUE REPEAT PATTEN COMMOSED OF 4 HEPTAPEPTIDES,
CHARACTERISTIC FOR ALPHA-HELICAL COLLED COLLS.

-1-SIMILARITY: CONTAINS 1 MYOSIN-LIKE GLOBULAR HEAD DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 -----ATTQSNYKSTDQEFQNFKTLHMDFEQKYKMVLEENERMNQEIVNLSKE---AQK 856
